(57) Abstract :

This study investigates the potential anti-psoriatic activity of an herbal soap formulated with ethanolic extract of Jasminum auriculatum. The research will focus on formulating the soap using a cold process method, incorporating the extract, and then evaluating its physical and chemical properties. Furthermore, the study will assess the soap's anti-psoriatic potential through various evaluations, including antimicrobial assays and skin irritation tests, aiming to provide a safer and more effective alternative for psoriasis management. The research involves the selection of suitable herbal extracts, their incorporation into a soap base, and the assessment of the resulting product's physical and chemical characteristics, including pH, foam stability, and skin compatibility. The goal this study is to develop a herbal soap that offers most effective and safest solution for psoriatic patients.
